Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to nucleic acids (e.g., AAC87518, AAC87519) which encode Trametes hirsuta pyranose oxidase (AAB48832). The invention also relates to expression constructs, expression vectors and recombinant cells comprising pyranose oxidase nucleic acid sequences, and the recombinant production of Trametes hirsuta pyranose oxidase. Pyranose oxidase catalyses the oxidation of several monosaccharides in the pyranose form at position C2 to produce 2-keto derivatives with the release of hydrogen peroxide. Nucleic acids encoding Trametes hirsuta pyranose oxidase may be used to produce the enzyme and to design oligonucleotide probes to identify and clone genomic pyranose oxidase cDNA or genomic DNA from different genera or species of microorganisms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  211 qiyystadgvderddvelptdahthmswafskpgvykavfaa----tlstpqgnasfga 265

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying at the appeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptides. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. They may be used to increase stem cell proliferation, to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAUS510-AAU3304 represent the amino acid in treatment of leukaemias. AAUS510-AAU3304 represent the amino acid
                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy \cdot
(fungi or bacteria). The present sequence represents pyranose oxidase from the fungus Trametes hirsuta.

inhibit type 2 methionine aminopeptidase (MeLR2). These inhibitors are useful for treating and/or diagnosing diseases involving abnormal angiogenesis (e.g. tumnours, diabetic retinopathy, inflammatory diseases, arteriosclerosis) or immune reactions which result in pathology (e.g. autoimmune disease, allergy and tissue graft rejection). The present sequence represents the amino acid sequence of rat MetAP2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 3, Application US/09093448A
Patent No. 6207704
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Liu, Jun O.
APPLICANT: Su, Zhuang
TITLE OF INVENTION: Type 2 Methionine Aminopeptidase (MetAP2) Inhibitors
TITLE OF INVENTION: Type 2 Methionine Aminopeptidase (MetAP2) Inhibitors
FILE REFERENCE: 0492611-0346
CURRENT PELLING DATE: 1998-06-08
NUMBER OF SEQ ID NOS: 4
SECTIMENT OF SEQ ID NOS: 4
SECTIMENT PELLING DATE: 1998-06-08
                                                                                                                                                                                                                                                                                                                                                               25; Gaps

Pred. No. is the number of results predicted by chance to have

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hexokinase (EC 2.7.1.1) 1 - fission yeast (Schizosaccharomyces pombe)
N;Alternate names: protein SPAC24H6.04
C;Species: Schizosaccharomyces pombe
C;Date: 15-Feb-1997 #sequence_revision 13-Mar-1997 #text_change 20-Jun-2000
C;Accession: S68694; T38360; S62406

-!- PTM: CONTAINS 12 O-LINKED GLCNAC.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M24C; ALSO KNOWN AS THE
MAP FAMILY 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PROTEINS.
FUNCTION: PROTECTS EIF-2 ALPHA-SUBUNIT FROM INHIBITORY
PHOSPHORYLATION BY EIF-2 KINASES. PLAYS A CRITICAL ROLE IN THE
REGULATION OF PROTEIN SYNTHESIS. IT ALSO INTERACTS WITH THE
EIF-2 GAMMA-SUBUNIT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CATALYTIC ACTIVITY: L-METHIONYLPEPTIDE + H(2)0 = L-METHIONINE

Submitted (APR-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: REMOVES THE AMINO-TERMINAL METHIONINE FROM NASCENT PROTEINS (BY SIMILARITY).
-!- FUNCTION: PROTECTS EIF-2 ALPHA-SUBUNIT FROM INHIBITORY PHOSPHORYLATION BY EIF-2 KINASES. PLAYS A CRITICAL ROLE IN THE RECULATION OF PROTEIN SYNTHESIS. IT ALSO INTERACTS WITH THE EIF-2 GAMMA-SUBUNIT (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: L-METHIONYLPEPTIDE + H(2)O = L-METHIONINE
+ PEPTIDE.

PUNCTION: ACTIVATION OF THE CARBOXYLATE GROUP OF 2,3-DIHYDROXY-BENZOATE (2,3-DHB), VIA ATP-DEPENDENT PPI EXCHANGE REACTIONS, TO THE ACTIVADENTLATE, PREPARING THAT MOLECULE FOR THE FINAL STAGES OF ENTEROBACTIN SYNTHESIS.

PATHWAY: ENTEROBACTIN BIOSYNTHESIS. ENTEROBACTIN IS AN IRON-CHELATING COMPOUND INVOLVED IN TRANSPORTING IRON FROM THE BACTERIAL ENVIRONMENT INTO THE CELL CYTOPLASM.

SUBUNIT: PROTEINS ENTE, ENTE, ENTE, AND ENTG FORM A MULTIENZYME COMPLEX CALLED ENTEROCHELIN SYNTHASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SWA4_MOUSE STANDARD; PRT; 551 AA.

jun/Ggi-bin/frameplot.pl. CAUTION: We may not have predicted the
jun/Ggi-bin/frameplot.pl. or content of the correct initiation codon. Where possible we choose an initiation
codon (atg, gtg, ttg or (att)) which is preceded by an upstream
ribosome binding site sequence (optimally 5-13bp before the
initiation codon). If this cannot be identified we choose the most
upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

The length in codons is given for each CDS.

The position of possible ribosome binding site sequences are given for SS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden markov model (krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /translation="MTVRPVVKRTARAVLLDGDHLILIKRTKPGVDPYWVTPGGGVEP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for small overlap between neighbouring submissions.

Cosmid Q11 Cosmid Q11 lies between H24 and D78 on the AseI-Q
                                                                                                                                                                                                                          Barrell, B.G. and Rajandream, M.A.

```
transcriptional regulator, len: 301 as; previously sequenced as TR:053869 (EMBL:037580) S.coelicolor lysR-like protein (301 aa). Highly similar to SW:ARAB_STRAT (EMBL:037580), arab, Streptomyces antibioticus transcriptional regulatory protein (301 aa), fasta socres; opt: 1581 z-score: 1813.2 E(::0, 80.3% identity in 300 aa overlap. Similar to many other transcriptional regulators. Contains probable helix-turn-helix motif at aa 17-38 (Score 1659, 44.84 SD). Contains Pfam match to PF00126 HTM_1, Bacterial regulatory helix-turn-helix protein, lysR family and PS00004 Bacterial regulatory proteins, lysR family signature"

Streptomyces netropsis.

Actinobacteria; Actinobacteridae;
Actinomycetaceae; Streptomycineae;
Actinomycetaceae; Streptomycineae;
I (bases 1 to 407)

Kraal, B., Luiten, R.G. and Van Wezel, G.P.
Reducing branching and enhancing fragmentation in culturing
Filamentous microorganisms
